

Managing Your Hourly Manufacturing Workforce in Times of Uncertainty

A platform designed to connect employees and managers

During times of uncertainty and operational disruption, it's imperative for manufacturers to keep employees safe and connected to the organization. Process changes caused by shifting business conditions can pose safety, scheduling, and production challenges. Potential new legislation requires operations to track and comply with updates, which creates additional complexity. Manufacturers need the ability to communicate regularly with the workforce to keep them informed and engaged while facilitating accurate compensation. Are you prepared to connect and engage with your hourly staff during times of uncertainty? UKG Dimensions™ (formerly Workforce Dimensions™) can help.

Ensure two-way communication with hourly employees

With a large population of hourly employees who may not have cellphones, how do you ensure they receive critical alerts? UKG Dimensions enables organizations to push messages out to all employees at once using multiple channels such as a timeclock, desktop, or mobile device. Likewise, employees can send their own messages back to management.

Make guided decisions using employee insights

Direct input from your workforce coupled with powerful analytics allows you to answer critical questions, identify potential issues, and uncover opportunities. By enriching labor and production data with employee feedback, manufacturers receive valuable insights that they can use to guide decision making and deliver better business outcomes.

Connect your entire organization with a single solution

Keep employees informed

Inform employees of critical information with multichannel delivery so they receive updates via their preferred method (mobile, clock, etc.) – on the same platform they use to clock in.

Monitor employees and get feedback

It's critical to solicit feedback from employees, which can alert managers to potential risks so they can get out in front of engagement, safety, and productivity issues.

Deploy a skilled and agile workforce

Quickly train and schedule employees in response to shifting production requirements. Identify training opportunities and track skills organizationally to ensure coverage.

Drive operational efficiencies

Arm managers with real-time employee productivity metrics to identify and remove bottlenecks. Locate and address issues associated with projected labor fluctuation, in the moment.

Leverage AI and machine learning

Let advanced artificial intelligence and machine-learning capabilities streamline workflows, help identify patterns, and alert managers to respond accordingly to changes on the plant floor.

Data accuracy for government reimbursements

In the event of changing legislation, easily configure new work and pay codes to ensure accurate labor data collection to support potential documentation requirements for government assistance.

Facilitate accurate compensation

Support employees financially by facilitating accurate and on-time compensation and offer (optional) immediate access to earned wages through same-day pay options.
