

OPUS EHR'S LAB MODULE - INTEGRATED SOLUTION

Laboratories play an integral part in the treatment and the progress of clinical goals.

Opus EHR understands the importance of lab results and how they affect treatment. By integrating with your lab partner Opus EHR eliminates extra steps, and double-entry, reducing the risk of human error. Order tests and receives results directly in Opus EHR.

Our lab module ensures smooth and efficient operations, where laboratories across the country can fully integrate with patient records directly for a bi-directional flow of information.

Opus EHR allows providers to request follow-up tests in the platform immediately after reviewing concerning or inconclusive results. This ensures that patients are treated promptly, especially in the case of urgent circumstances.

BENEFITS OF INTEGRATING OPUS EHR WITH YOUR LAB PARTNER

- Faster ordering and receiving of results
- Improves overall efficiency
- Better organization of patient records
- Optimizes explanatory information with test reports
- Advances patient engagement and outcomes
- Enhance insurance and regulatory compliance by keeping all records in the same place

KEY FEATURES OF OPUS LAB MODULE

- Regulatory and HIPAA compliance
- Patient Registration and Results Portal
- Specimen labeling and storage
- Real-time data exports
- Critical call logs and audit reports
- User permission and password protection
- Corrective action logs
- Data Integration
- Inventory management
- Laboratory department integration
- Consolidated reports for patient results
- Multiple invoice formats
- Sample storage management
- Report generation
- File import and export
- Integrates with external data sources
- Cloud-based deployment
- Built-in tools for analytics and data administration
- Automated appointment waitlist tools
- Online scheduling tools
