Advancing Patient-Centered Engagement

Automate Text, Email and Phone Call Reminders

Practice Management appointment reminder service and best practices lower no-show rates and increase productivity. Here are eight reasons why Opus PM does it better than the rest.

Decrease Payment Delays
PM's appointment reminder service notes patient responses directly into your system.

Multi-Location Management
Have more than one location? PM allows you to see reports, upload, and manage from one login.

Configurable Reminders
Automated messages based on location, doctor, appointment type, or whether they have more than one appointment. We've seen it all.

Customer Service
We pick up the phone. We think it's fundamental, but not everyone does. Our platform is better, but this might be the real reason customers stay.

No-Show Engagement
PM's appointment reminder service notes patient responses directly into your system.

Patient Recalls
Sometimes patients forget to schedule their next appointment. PM automatically reaches them to get them on the books.

Two-Way Patient Chat
PM includes Messenger with all products so that patients can reply to any reminder and start a 2-way chat over SMS

Broadcast Messaging
Last minute changes? Weather delays? Emergencies? PM makes it easy to quickly notify your patients and staff – by provider, appointment time or location.
