

TELEHEALTH

Expand Your Business Reach Through Telehealth Services

Expansion of Services

Geographic limitations are a worry of the past. Provide your patients with telehealth therapy wherever they have access to a smart phone or computer.

Paperless Process

Custom, digital documents sent to your patient's phone for signature and returned back to their EHR. Keep your telehealth CPT codes organized while staying compliant.

Continuation of Care

The benefits of telehealth include expanding your services to include continued patient support at all levels of care via a HIPAA compliant telehealth solution.

OPTIMIZE YOUR PATIENT EXPERIENCE.

Your patient privacy matters! Not all HIPAA compliant telehealth platforms are created equal. While current guidelines have loosened to meet the demand for telehealth counseling, it's best to stay within the original, more stringent, guidelines of HIPAA with our encrypted video sessions.

Don't compromise telehealth patient privacy - stay in compliance with our telehealth technology.

ADVANTAGES OF TELEHEALTH

Better patient outcomes, longer lengths of stay, higher reimbursements.

TELEHEALTH EQUIPMENT

Opus Telehealth platform simplifies the process. No need for multiple apps, our platform unifies the video conferencing, scheduling, remote patient group check in, and documentation in one place.

Now that's HIPAA compliant telehealth.
