OUTCOME MEASURE TOOLS

OPUS EHR

New Opportunities with Opus OMT

The new top priority in the behavioral healthcare field is measurement-based care. The new Opus EHR Outcome Measures Tool (OMT) provides just that, and will help accredited customers increase their quality of care, treatment and services they provide.

How Does Opus OMT Work?

Clinics use OMT to gather data across seven different mental health outcome measures for clients at regular intervals throughout their treatment. Opus EHR then sends clinics the raw data for the groups to analyze. After analyzing the data, clinics are able to produce important results that show clients' improvements and slice the data by length of stay to demonstrate which lengths of stay are most effective.

OPUS OMT HIGHLIGHTS

✓ Seven pre-loaded standardized instruments in the system

✓ Flexibility to load in any instruments the customer requests

✓ Data visualizations

✓ Auto distribution of assessments to the portal at predetermined intervals

OPUS OMT ASSESSMENTS

✓ Altman Self-Rating Mania Scale
✓ CAGE-AID Assessment
✓ Columbia-Suicide Severity Rating Scale
✓ Generalized Anxiety Disorder
✓ Scale (GAD-7)
✓ PHQ-9
✓ PTSD Screening (PLC-6PCL)
✓ WHODAS 2.0
