

Project Management

INTRODUCTION

Investing in a secure and mobile field enablement solution that streamlines your project management and deployment processes can maximize opportunities and drive results. For this reason, leading construction firms leverage software solutions that are based on a single platform to unify the field with the back office

In fact, these robust field enablement solutions also store the critical financial, operational and organizational data used to manage and optimize field

operations in a centralized repository. It essentially becomes the one “source of truth” that is seamlessly shared across functions and departments, without duplication or multiple divergent sets.

On top of that, field solutions that deliver the highest impact generally have a full set of mobile capabilities, an intuitive user interface and meets the security requirements that are required by most organizations today.

FEATURES

Bidding & Procurement

- Subcontractor Pre-qualification
- Invitation to Bid
- Bid Leveling (Analyzing Bids)

PROJECT MANAGEMENT FOR MOBILE

The full power of CMiC – all in the palm of your hand.

With an intuitive interface and robust analytics capabilities, CMiC Mobile Applications streamline data collection, workflow management and analytical reporting for your entire field team.

Project Management

CMiC Project Management helps construction firms manage all aspects of their project delivery operations. In particular, this suite of solutions allows organizations to seamlessly collaborate with all project stakeholders, control changes, manage the supply chain of subcontractors and material suppliers, simplify the bid process and manage documents. In addition, CMiC Project Management helps teams optimize forecasting and resource planning with its financial underpinnings, providing verified costs for every transaction source. By using these applications, firms complete complex projects with tightly managed costs and timeframes – on spec, on time and on budget.

CMiC Project Management doesn't simply enable construction teams to work efficiently in the field. It sets the stage for future growth – with little to no added overhead – by seamlessly integrating with planning and financial systems. This set of solutions captures and organizes data from every job site in a consistent way, enabling decision makers to draw richer insights from data – in real time.

CMiC delivers complete and unified Financials and Project Management solutions for construction and capital projects firms. CMiC's robust software transforms how firms optimize productivity, minimize risk and drive growth by planning and managing all financials, projects, resources, and content assets – from a Single Database Platform™.
